COMMISSIONER FOR PATENTS
 Washington, D.C. 20231

Sir:

Transmitted herewith is a response to an office action in the subject application.

- ☐ Applicants claim small entity status of this application under 37 CFR 1.27.
- ☒ Petition for Extension of Time
- ☐ Applicants petition for a one-month extension of time under 37 CFR 1.136, the fee for which is \$110.00 (enclosed).
- ☒ Applicants believe that no petition for an extension of time is necessary. However, to the extent that such petition is deemed necessary, Applicants hereby petition for a sufficient extension of time to render the present submission timely. Please charge Deposit Account No. 12-1216 for the appropriate petition fee.
- ☒ No additional claim fee is required.
- ☐ Other:

The claim fee has been calculated as shown below:

For: MATCHING CIRCUIT AND
SEMICONDUCTOR DEVICE

**PENDING CLAIMS AFTER AMENDMENTS
MADE IN RESPONSE TO OFFICE ACTION DATED MAY 10, 2002**

13. A monolithic microwave integrated circuit (MMIC) comprising:
a transistor having an input terminal and an insulating film around the transistor, affecting input capacitance of the transistor, the input capacitance changing directly with thickness of the insulating film; and
a metal-insulator-metal (MIM) capacitor including two metal electrodes separated by part of the insulating film, one of the metal electrodes being connected to the input terminal of the transistor, capacitance of the MIM capacitor changing inversely with the thickness of the insulating film, whereby variations in the input capacitance of the transistor and the capacitance of the MIM capacitor due to variations in the thickness of the insulating film are compensated.

14. The MMIC according to claim 13 including a bias circuit connected in parallel with the MIM capacitor.

15. A monolithic microwave integrated circuit (MMIC) comprising:
a transistor having an output terminal and an insulating film around the transistor, affecting output capacitance of the transistor, the output capacitance changing directly with thickness of the insulating film; and
a metal-insulator-metal (MIM) capacitor including two metal electrodes separated by part of the insulating film, one of the metal electrodes being connected to the output terminal of the transistor, capacitance of the MIM capacitor changing inversely with the thickness of the insulating film, whereby variations in the output capacitance of the transistor and the capacitance of the MIM capacitor due to variations in the thickness of the insulating film are compensated.
